

# WE'LL JOIN YOU ON YOUR JOURNEY TO THE CLOUD

## GUARANTEE COST SAVINGS

Run **cost analyses** on each workload showing costs on-prem vs. in the cloud. Make sure migration will **save money** - not cost more!

## MOVE THE RIGHT DATA

Which data should be moved to which **cloud tier**? And which data should stay put? Evaluate usage, performance, access, and other **business continuity / governance** factors before migrating.

## CENTRALIZE VISIBILITY

During and after migration, track your **entire infrastructure** - on-prem, virtual, and in the cloud - all on a **single pane of glass**.

## PREVENT INTERRUPTIONS

Avoid errors, misconfigurations, and slowdowns during your migration. Rely on proactive monitoring to **find risks** and **discover remediations** before a problem occurs.

## OPTIMIZE SPENDING

Help your FinOps team by **maximizing cloud savings** using workload expense heat maps, growth trend charts, overallocation alerts, and reallocation recommendations.

## PLAN AHEAD

Don't get duped by aggressive SLAs. Forecast future capacity & performance requirements to **slim down contracts** and **prevent overpaying** for over-allocations.
